Zirkonzahn Mexiko

Prettau® Zirconia

In order to demonstrate the functionality of these types of construction, we collaborate with Dr. Fernando Rojas-Vizcaya from Spain and manufacture several works each month. The advantages of occlusally screwed Prettau® bridges are their easy fabrication and their stability.

Using wax-up and double-scan, the construction is realized in a short period of time. The system creates the occlusal screw accesses automatically. The buccal part of the front teeth has been veneered, resulting in a very high esthetic in the visible part and high stability in the lateral tooth area.
